

Langley Research Center Safety Alert

SA-04-92

Date: 2-28-92

TO: Distribution

FROM: 429/Head, Risk Management Branch, SSQRD

SUBJECT: Asbestos Configuration Management

REF: Safety Alert, November 8, 1991, Subject as Above

Since publication of the referenced Safety Alert, all asbestos surveys pertaining to LaRC facilities have been distributed. Your cooperation during this first phase of implementing the Asbestos Configuration Management Program has been appreciated.

Phase two of the process is to update the surveys to reflect current facility status since additional asbestos may have been discovered or removed since the surveys were accomplished. Technology Application, Inc. (TAI) will incorporate changes to the baseline survey in accordance with LHB 1740.4, "Facility Systems Safety and Configuration Management." This will be a time of intensive search for information, as input for changes will be provided through Industrial Hygiene Audits, construction/demolition activities, and maintenance Work Orders (69s).

We request your assistance and cooperation as we continue to implement the program. A Safety Analyst from TAI will be contacting you in the near future to begin the update process. If you have any questions, call Chuck Zeitman, extension 43371.
